Bureau of  
Economic Analysis

FOR WIRE TRANSMISSION: 8:30 A.M. EDT, WEDNESDAY, JULY 31, 2002

Virginia H. Mannerling:	(202) 606-5304	BEA 02-23
Recorded message:	606-5306	
Brent Moulton:	606-9606 (Annual Revision)	
Carol Moylan:	606-9715	

**NATIONAL INCOME AND PRODUCT ACCOUNTS**  
**C SECOND QUARTER 2002 GDP (ADVANCE)**  
**C REVISED ESTIMATES: 1999 THROUGH FIRST QUARTER 2002**

Real gross domestic product -- the output of goods and services produced by labor and property located in the United States -- increased at an annual rate of 1.1 percent in the second quarter of 2002, according to advance estimates released by the Bureau of Economic Analysis. In the first quarter, real GDP increased 5.0 percent.

The estimates released today reflect revisions in the national income and product accounts (NIPA's) beginning with the first quarter of 1999. Revisions are usually made each July to incorporate source data that are more complete, more detailed, and otherwise more consistent than previously available. This release includes the revised quarterly estimates of GDP, corporate profits, and personal income and provides an overview of the effects of the revision.

The August 2002 Survey of Current Business will contain NIPA tables and an article describing the revisions. The revised estimates will be available from BEA's Web site (see page 9).

---

NOTE.--Quarterly estimates are expressed at seasonally adjusted annual rates, unless otherwise specified. Quarter-to-quarter dollar changes are differences between these published estimates. Percent changes are calculated from unrounded data and annualized. "Real" estimates are in chained (1996) dollars. Price indexes are chain-type measures.

This news release is available on BEA's Web site at <[www.bea.gov/bea/rels.htm](http://www.bea.gov/bea/rels.htm)>.

The Bureau emphasized that the second-quarter "advance" estimates are based on source data that are incomplete or subject to further revision by the source agency (see the box on page 3). The second-quarter "preliminary" estimates, based on more comprehensive data, will be released on August 29, 2002.

The major contributors to the increase in real GDP in the second quarter were personal consumption expenditures (PCE), private inventory investment, exports, and federal government spending. The contributions of these components were partly offset by a decrease in nonresidential structures. Imports, which are a subtraction in the calculation of GDP, increased sharply.

The deceleration in real GDP growth in the second quarter primarily reflected decelerations in private inventory investment and in PCE, a downturn in state and local government spending, and a deceleration in residential fixed investment that were partly offset by an acceleration in exports and an upturn in equipment and software. There was a sharp acceleration in imports in the second quarter.

The price index for gross domestic purchases, which measures prices paid by U.S. residents, increased 2.1 percent in the second quarter, compared with an increase of 1.2 percent in the first. Excluding food and energy prices, the price index for gross domestic purchases increased 1.3 percent in the second quarter, compared with an increase of 1.4 percent in the first. About 0.3 percentage point of the first-quarter increase in the index was accounted for by the pay raise for federal civilian and military personnel, which is treated as an increase in the price index of employee services purchased by the federal government.

Real personal consumption expenditures increased 1.9 percent in the second quarter, compared with an increase of 3.1 percent in the first. Durable goods purchases increased 2.4 percent, in contrast to a decrease of 6.3 percent. Nondurable goods decreased 0.6 percent, in contrast to an increase of 7.9 percent. Services expenditures increased 3.0 percent, compared with an increase of 2.9 percent.

Real nonresidential fixed investment decreased 1.6 percent in the second quarter, compared with a decrease of 5.8 percent in the first. Nonresidential structures decreased 14.0 percent, compared with a decrease of 14.2 percent. Equipment and software increased 2.9 percent, in contrast to a decrease of 2.7 percent. Real residential fixed investment increased 5.0 percent, compared with an increase of 14.2 percent.

Real exports of goods and services increased 11.7 percent in the second quarter, compared with an increase of 3.5 percent in the first. Real imports of goods and services increased 23.5 percent, compared with an increase of 8.5 percent.

Real federal government consumption expenditures and gross investment increased 7.4 percent in the second quarter, the same increase as in the first quarter. National defense increased 8.0 percent, compared with an increase of 11.6 percent. Nondefense increased 6.3 percent, compared with an increase of 0.4 percent. Real state and local government consumption expenditures and gross investment decreased 1.1 percent, in contrast to an increase of 4.6 percent.

The real change in private inventories added 1.15 percentage points to the second-quarter change in real GDP, after adding 2.60 percentage points to the first-quarter change. Private businesses increased inventories \$1.0 billion in the second quarter, following decreases of \$28.9 billion in the first quarter and \$98.4 billion in the fourth.

Real final sales of domestic product -- GDP less change in private inventories -- decreased 0.1 percent in the second quarter, in contrast to an increase of 2.4 percent in the first.

### **Gross domestic purchases**

Real gross domestic purchases -- purchases by U.S. residents of goods and services wherever produced -- increased 2.8 percent in the second quarter, compared with an increase of 5.6 percent in the first.

### **Disposition of personal income**

Current-dollar personal income increased \$111.1 billion in the second quarter, compared with an increase of \$109.5 billion in the first. Personal tax and nontax payments decreased \$10.4 billion, compared with a decrease of \$167.6 billion.

Disposable personal income increased \$121.5 billion in the second quarter, compared with an increase of \$277.1 billion in the first. Real disposable personal income increased 3.8 percent, compared with an increase of 14.6 percent.

Personal outlays increased \$85.6 billion in the second quarter, compared with an increase of \$66.7 billion in the first. Personal saving -- disposable personal income less personal outlays -- was \$307.9 billion in the second quarter, compared with \$272.0 billion in the first. The personal saving rate -- saving as a percentage of disposable personal income -- increased from 3.5 percent in the first quarter to 4.0 percent in the second.

### **Current-dollar GDP**

Current-dollar GDP -- the market value of the nation's output of goods and services -- increased 2.2 percent, or \$56.8 billion, in the second quarter to a level of \$10,369.9 billion. In the first quarter, current-dollar GDP increased 6.5 percent, or \$160.2 billion.

Information on the assumptions used for unavailable source data is provided in a technical note that is posted with the news release on BEA's Web site. Within a few days after the release, a detailed "Key Source Data and Assumptions" file is posted on the Web site. In the middle of each month, an analysis of the current quarterly estimates of GDP and related series is made available on the Web site; click on Survey of Current Business, "Business Situation."

## **Revision of the National Income and Product Accounts**

The revised estimates, which begin with 1999, reflect the results of the regular annual revision of the national income and product accounts (NIPA's). These revisions, usually made each July, incorporate newly available and more comprehensive source data, as well as improved estimating methodologies. Because of the additional data shown, tables 3, 10, and 11 are each divided into two separate tables -- 3A and 3B, 10A and 10B, and 11A and 11B.

There are also a number of special tables that compare the revised and previously published estimates for selected periods: Table 1A shows the percent change in real GDP and related measures; table 1B shows revisions to current-dollar GDP, to national income, and to disposition of personal income; table 4A shows the percent change in the chain-type price indexes for GDP and related measures; and table 11C shows revisions to corporate profits by industry.

This section of the release discusses the highlights of the revisions and describes their sources.

### **Summary of major revisions**

The revised data modify the quarterly pattern of real GDP for 1999-2001. Both the previously published and the revised estimates show GDP growth peaking in the fourth quarter of 1999 and slowing substantially during the quarters of 2000. However, the revised estimates show declines in GDP for each of the first three quarters of 2001, whereas the previously published estimates showed positive but decelerating growth in the first half of 2001 and a decline in the third quarter. Both sets of estimates show GDP growth resuming in the fourth quarter of 2001.

The most important differences between the revised and the previously published estimates for 1999-2001 are the following:

- The annual rate of growth of real GDP from 1998 to 2001 was revised down from 3.1 percent to 2.7 percent. The annual rate of growth of real GDP from 1998:IV to 2002:I was revised down from 2.8 percent to 2.4 percent. The largest contributors to the downward revisions were downward revisions to the growth of personal consumption expenditures (PCE) and of nonresidential fixed investment.
- For 2001, the revised estimates show real GDP growth of 0.3 percent; the previous estimate was 1.2 percent. Lower growth of PCE and larger declines in nonresidential fixed investment and in change in private inventories accounted for most of the revision.
- As described above, the revised estimates show a longer downturn in real GDP than the previously published estimates. The percent change at an annual rate in real GDP was revised down from 1.3 percent to -0.6 percent for the first quarter of 2001, was revised down from 0.3 percent to -1.6 percent for the second quarter of 2001, and was revised up from -1.3 percent to -0.3 percent for the third quarter of 2001.
- For 2001, personal income was revised down 0.4 percent. Wages and salaries was revised down 2.9 percent, and personal interest income was revised up 9.8 percent.

### **Revisions to 1999-2001 estimates**

The percent change from the preceding year in real GDP was unrevised at 4.1 percent for 1999, was revised down from 4.1 percent to 3.8 percent for 2000, and was revised down from 1.2 percent to 0.3 percent for 2001.

For 2000, the largest contributors to the downward revision to real GDP growth were fixed investment in equipment and software, PCE for nondurable goods, and PCE for durable goods; the contributions of these components were partly offset by an upward revision to change in private inventories. For 2001, the largest contributors to the downward revision to real GDP growth were PCE for services, equipment and software, change in private inventories, and state and local consumption expenditures and gross investment; the contributions of these components were partly offset by an upward revision to federal consumption expenditures and gross investment.

The percent change from fourth quarter to fourth quarter in real GDP was revised down from 4.4 percent to 4.3 percent for 1999, was revised down from 2.8 percent to 2.3 percent for 2000, and was revised down from 0.5 percent to 0.1 percent for 2001. For 2000, the downward revision was mainly accounted for by slower growth in PCE and private fixed investment. For 2001, the downward revision was mainly accounted for by slower growth in PCE and a decrease, rather than an increase, in net exports during the year.

The largest downward revision to the percent changes in real GDP for the quarters of 1999-2001 was 1.9 percentage points (first and second quarters of 2001); the largest upward revision was 1.0 percentage point (third and fourth quarters of 2001). The average revision to the quarterly percent changes in this annual revision was 0.9 percentage point (without regard to sign); the revisions without regard to sign to the quarterly percent changes in the annual NIPA revisions from 1979 through 2001 averaged 0.7 percentage point.

From its cyclical trough in the first quarter of 1991 to the fourth quarter of 2000, GDP expanded at an average annual rate of change of 3.5 percent. Real GDP reached a peak in the fourth quarter of 2000; GDP then decreased a total of 0.6 percent (0.8 percent at an average annual rate) in the first three quarters of 2001. GDP increased 2.7 percent at an average annual rate in the fourth quarter of 2001.

The percent change from the preceding year in the price index for gross domestic purchases was unrevised at 1.5 percent for 1999, was revised down from 2.6 percent to 2.5 percent for 2000, and was revised up from 1.7 percent to 1.9 percent for 2001. The largest upward revision to the percent change in the price index for the quarters of 1999-2001 was 0.6 percentage point (first quarter of 2001); the largest downward revision was 0.5 percentage point (first quarter of 2000).

Current-dollar GDP was revised up \$5.7 billion, or 0.1 percent, for 1999; was revised down \$48.3 billion, or 0.5 percent, for 2000; and was revised down \$125.9 billion, or 1.2 percent, for 2001. The percent change from the preceding year was revised up from 5.5 percent to 5.6 percent for 1999, was revised down from 6.5 percent to 5.9 percent for 2000, and was revised down from 3.4 percent to 2.6 percent for 2001. Current-dollar GNP (GDP plus net income receipts from the rest of the world) was revised up \$35.3 billion, or 0.4 percent, for 1999; was revised down \$12.8 billion, or 0.1 percent, for 2000; and was revised down \$98.7 billion, or 1.0 percent, for 2001. Net income receipts was revised up for all 3 years: \$29.5 billion for 1999, \$35.5 billion for 2000, and \$27.2 billion for 2001. The revisions to net income receipts -- which affect GNP, national income, corporate profits, net interest, and personal interest income -- stem from the revisions to BEA's international transactions accounts (ITA's) that were released in June. Although the revisions to the ITA's extended back to 1993, the revisions prior to 1999 are not incorporated into the NIPA's at this time. (An article describing the revisions to the ITA's was published in the July 2002 issue of the Survey of Current Business.)

National income was revised up \$6.6 billion, or 0.1 percent, for 1999; was revised up \$3.5 billion, or less than 0.1 percent, for 2000; and was revised down \$95.5 billion, or 1.2 percent, for 2001. For 1999, upward revisions to net interest, to nonfarm proprietors' income, and to rental income of persons were partly offset by a downward revision to corporate profits. For 2000, a large upward revision to net interest and smaller upward revisions to nonfarm proprietors' income, to other labor income, and to rental income of persons were partly offset by a large downward revision to corporate profits and a smaller downward revision to farm proprietors' income. For 2001, a large downward revision to wages and salaries and smaller downward revisions to corporate profits, to farm proprietors' income, and to nonfarm proprietors' income were partly offset by a large upward revision to net interest and a smaller upward revision to other labor income.

Corporate profits from current production -- profits before tax with inventory valuation and capital consumption adjustments -- was revised down for all 3 years: \$19.4 billion for 1999, \$88.3 billion for 2000, and \$35.5 billion for 2001. For 1999, profits before tax (PBT) accounted for most of the revision. For 2000 and 2001, large downward revisions to PBT and smaller downward revisions to the capital consumption adjustment accounted for the revisions. For 1999, the downward revision was to profits of both financial and nonfinancial corporations. For 2000 and 2001, profits of nonfinancial corporations accounted for most of the downward revisions.

Personal income was revised up \$9.2 billion, or 0.1 percent, for 1999; was revised up \$87.4 billion, or 1.1 percent, for 2000; and was revised down \$38.2 billion, or 0.4 percent, for 2001. For 1999, upward revisions to personal interest income, to nonfarm proprietors' income, and to rental income of persons were partly offset by a downward revision to personal dividend income. For 2000, a large upward revision to personal interest income and smaller upward revisions to other labor income, to nonfarm proprietors' income, and to rental income of persons were partly offset by downward revisions to farm proprietors' income and to personal dividend income. For 2001, a large downward revision to wage and salary disbursements and smaller downward revisions to farm proprietors' income, to personal dividend income, and to nonfarm proprietors' income were partly offset by a large upward revision to personal interest income and smaller upward revisions to transfer payments to persons and to other labor income. The large downward revision to wage and salary disbursements for 2001 reflected the incorporation of newly available Bureau of Labor Statistics (BLS) tabulations of wages and salaries of employees covered by state unemployment insurance.

Disposable personal income (DPI) (personal income less personal tax and nontax payments) was revised up \$9.4 billion for 1999, was revised up \$89.2 billion for 2000, and was revised down \$24.1 billion for 2001. For 1999 and 2000, the revisions were similar to those to personal income. For 2001, a downward revision to personal tax and nontax payments also contributed to the revision. The percent change from the preceding year in real DPI was revised up from 2.5 percent to 2.6 percent for 1999, was revised up from 3.5 percent to 4.8 percent for 2000, and was revised down from 3.6 percent to 1.8 percent for 2001.

Personal outlays was revised down for all 3 years. Downward revisions to PCE accounted for most of the revisions for 1999 and 2000 and more than accounted for the revision for 2001. The personal saving rate (personal saving as a percentage of DPI) was revised up from 2.4 percent to 2.6 percent for 1999, was revised up from 1.0 percent to 2.8 percent for 2000, and was revised up from 1.6 percent to 2.3 percent for 2001.

The statistical discrepancy is current-dollar GDP less current-dollar gross domestic income (GDI). It arises because most components of GDP and of GDI are estimated independently. GDP measures final expenditures -- the sum of consumer spending, private investment, net exports, and government spending. GDI measures the incomes earned in the production of GDP. In concept, GDP is equal to GDI. In practice, they differ because they are estimated using less than perfectly consistent source data.

As a result of the annual revision, the statistical discrepancy as a percentage of GDP was revised from -0.8 percent to -0.4 percent for 1999, was revised less than 0.1 percentage point at -1.3 percent for 2000, and was revised from -1.5 percent to -1.2 percent for 2001. The revision to the discrepancy for 1999 primarily reflected a downward revision to GDI. For 2000 and 2001, downward revisions to GDI were partly offset by downward revisions to GDP.

### **New source data and changes in methodology**

The annual revision incorporated data from the following federal statistical sources: Census Bureau annual surveys for 2000 and revised monthly indicators for 1999-2001 of manufactures, of merchant wholesale trade, and of retail trade; Census Bureau annual surveys of services for 2000 and 2001, and of state and local governments for 1999 and 2000; Census Bureau monthly survey of construction put in place for 1999-2001; federal government budget data for fiscal years 2001 and 2002; Internal Revenue Service tabulations of tax returns for corporations for 1999 and 2000 and for sole proprietorships and partnerships for 2000; BLS tabulations of wages and salaries of employees covered by state unemployment insurance for 2001; Department of Agriculture farm statistics for 2001; and BEA's ITA's for 1999-2001. A table showing the major current-dollar revisions and their sources for each component of GDP, national income, and personal income will be published in the August 2002 issue of the Survey of Current Business.

The revised estimates also include several changes in methodology and a change to the revision schedule:

- C When final estimates of GDP for the current quarter are released (in September, December, March, and June), BEA will also usually release revised estimates for wages and salaries and affected income-side aggregates for the previous quarter (GDP and its components will continue to be revised only for the current quarter). This new revision schedule will permit the incorporation of the most recently available wage and salary data from the unemployment insurance program on a more timely basis and will improve the quality of the wage and salary estimates. Underlying this change is a new method for estimating quarterly wages and salaries. Specifically, quarterly estimates of wages and salaries have been improved by using seasonally adjusted quarterly information from BLS tabulations of wages and salaries of employees covered by state unemployment insurance. Previously, only the annual estimates reflected data from this source; the quarterly estimates of wages and salaries were based on employment, hours, and average hourly earnings from the establishment survey of the BLS current employment statistics, which is a less comprehensive data source.
- C New price indexes are introduced for financial services within PCE services and foreign transactions. Within exports and imports, beginning with the fourth quarter of 2000, the BLS producer price index (PPI) for security brokers, dealers, and investment banking companies replaces an annual implicit price deflator (IPD) from BEA's GDP by industry estimates for security and commodity brokers. Within PCE services, brokerage PPI's are now used in the deflation of some components of brokerage and investment counseling. Previously, real estimates of these components were based on volume and trade data from the Securities and Exchange Commission and from trade sources and on the value of trading in U.S. government and agency securities deflated by the BLS consumer price index (CPI) for all items.
- C New price indexes are introduced for other components of foreign transactions and components of federal government consumption expenditures. Within exports and imports, a new price index is used to deflate net insurance (premiums less losses). Beginning with the first quarter of 1999, a weighted average of the BLS PPI's for "life insurance carriers" and "premiums for property and casualty insurance" replaces an annual IPD from BEA's GDP by industry estimates for insurance carriers. Within federal government, price indexes derived from PPI's, employment cost indexes, and CPI's replace weighted averages of price indexes derived from average hourly earnings for several expenditure categories. Specifically, within defense consumption expenditures, the new indexes are used for installation support services, weapons support services, personnel support services, and printing (included in "other" nondurable goods). Within nondefense consumption expenditures, the new indexes are used for research and development (included in "other" services) and printing (included in "other" nondurable goods).

BEA's major national, international, regional, and industry estimates; the Survey of Current Business; and BEA news releases are available without charge on BEA's Web site:

<[www.bea.gov](http://www.bea.gov)>

Summary BEA estimates are available on recorded messages at the time of public release at the following telephone numbers:

- |                |                                 |
|----------------|---------------------------------|
| (202) 606-5306 | Gross domestic product          |
| 606-5303       | Personal income and outlays     |
| 606-5362       | U.S. international transactions |

Most of BEA's estimates and analyses are published in the Survey of Current Business, BEA's monthly journal. Subscriptions and single copies of the printed Survey are for sale by the Superintendent of Documents, U.S. Government Printing Office. Internet: <[bookstore.gpo.gov](http://bookstore.gpo.gov)>; phone: 202-512-1800; fax: 202-512-2250; mail: Stop SSOP, Washington, DC 20402-0001.

Next release -- August 29, 2002, at 8:30 A.M. EDT for:  
Gross Domestic Product: Second Quarter 2002 (Preliminary)  
Corporate Profits: Second Quarter 2002

### **Comparisons of Revisions to GDP**

Quarterly estimates of GDP are released on the following schedule: "Advance" estimates, based on source data that are incomplete or subject to further revision by the source agency, are released near the end of the first month after the end of the quarter; as more detailed and more comprehensive data become available, "preliminary" and "final" estimates are released near the end of the second and third months, respectively. The "latest" estimates reflect the results of both annual and comprehensive revisions.

Annual revisions are usually carried out each summer and cover the quarters of the most recent calendar year and of the 2 preceding years. Comprehensive (or benchmark) revisions are carried out at about 5-year intervals and incorporate definitional and classificational changes that update the accounts to portray more accurately the evolving U.S. economy and statistical changes that update the accounts to reflect the introduction of new and improved methodologies and the incorporation of newly available and revised source data.

The table below shows comparisons of the revisions between quarterly percent changes of GDP for the different vintages of the estimates. These comparisons can be used to assess the likely size of future revisions. For example, two-thirds of the revisions between the quarterly change in the advance estimate of real GDP and that in the final estimate were within a range of -0.6 to +0.9 percentage point. Thus, based on past history, the second-quarter change in real GDP now estimated at 1.1 percent at an annual rate, is not likely to be revised below 0.5 percent or above 2.0 percent in the next two releases.

**Rewisions Between Quarterly Percent Changes of GDP: Vintage Comparisons**  
[Annual rates]

Vintages compared	Average without regard to sign	Range	
		Two-thirds of revisions	Nine-tenths of revisions
<b><u>Current-dollar GDP</u></b>			
Advance to preliminary.....	0.6	-0.5 to 0.8	-0.9 to 1.4
Advance to final.....	.7	-.6 to 1.0	-1.0 to 1.6
Preliminary to final.....	.3	-.3 to .4	-.6 to .7
Advance to latest.....	1.3	-.6 to 2.0	-1.9 to 3.7
Preliminary to latest.....	1.2	-1.0 to 1.6	-1.6 to 3.0
Final to latest.....	1.2	-0.9 to 1.8	-1.7 to 2.9
<b><u>Real GDP</u></b>			
Advance to preliminary.....	0.5	-0.5 to 0.7	-0.9 to 1.2
Advance to final.....	.6	-.6 to .9	-.9 to 1.3
Preliminary to final.....	.3	-.3 to .4	-.5 to .6
Advance to latest.....	1.4	-1.1 to 2.0	-1.6 to 3.4
Preliminary to latest.....	1.4	-1.1 to 1.9	-1.7 to 3.1
Final to latest.....	1.4	-1.1 to 2.1	-1.8 to 3.0

NOTE.--These comparisons are based on the period from 1978 through 2000 for the first three comparisons in each group and on the period from 1978 through 1998 for the last three comparisons in each group.

Table 1.—Real Gross Domestic Product and Related Measures: Percent Change From Preceding Period  
[Percent]

	1998	1999	2000	2001	Seasonally adjusted at annual rates																
					1998				1999				2000				2001				2002

NOTE.—Users are cautioned that particularly for components for which relative prices are changing rapidly, the use of chained-dollar estimates to calculate component shares or component contributions to real growth may be misleading even just a few years from the base year. For accurate estimates of the contributions to percent changes

in real GDP, use table 2.

See "Explanatory Note" at the end of the tables.

1. Effective with the estimates scheduled for release on November 26, 2002, chained-dollar gross product of nonfinancial corporate business for 1999 to 2002 will be revised to reflect revisions to the gross product price indexes for nonfinancial industries.

2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of

the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100.

3. Chained-dollar net product of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

4. The implicit price deflator for gross product of nonfinancial corporate business divided by 100.

1. For some components of final sales of computers, includes computer parts.

2. Farm output less intermediate goods and services purchased.

3. Consists of GDP less gross product of farm, of housing, of households and institutions, and of general govern-

ment.

See "Explanatory Note" at the end of the tables.

## Explanatory Note: Measures of Output and Prices

This note describes the calculation of chain-type quantity and price indexes used in the NIPA's.

Changes in current-dollar GDP measure changes in the market value of goods, services, and structures produced in the economy in a particular period. These changes can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year--at present, the year 1996--equal to 100.

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from two adjacent years. (Quarterly changes in quantities and prices are calculated using a Fisher formula that incorporates weights from two adjacent quarters; quarterly indexes are adjusted for consistency to the annual indexes before percent changes are calculated.) For example, the 2000-01 annual percent change in real GDP uses prices for 2000 and 2001 as weights, and the 2000-01 annual percent change in GDP prices uses quantities for 2000 and 2001 as weights. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. The Fisher formula produces percent changes in quantities and prices that are not affected by the choice of reference years. In addition, because the changes in quantities and prices calculated in this way are symmetric, in general, the product of a quantity index and the corresponding price index equals the current-dollar index. (BEA also publishes a measure of the price level known as the "implicit price deflator (IPD)," which is calculated as the ratio of current-dollar value to the corresponding chained-dollar value, multiplied by 100. The values of the IPD are very close to the values of the corresponding "chain-type" price index for all periods.)

Chain-type quantity and price indexes for GDP and its major components are presented in this release as index numbers in table 5 and in the form of percentage changes from the preceding period in tables 1, 4, 6 and from the quarter one year ago in table 7. Contributions by major components to changes in real GDP are presented in table 2. BEA also prepares measures of real GDP and its components in a dollar-denominated form, designated "chained (1996) dollar estimates." For GDP and most other series, these estimates, which are presented in table 3, are computed by multiplying the 1996 current-dollar value by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 1996 and if real output for this component increased 10 percent in 1997, then the chained (1996) dollar value of this component in 1997 would be \$110 (\$100 x 1.10).

For analyses of changes over time in an aggregate or in a component, the percentage changes calculated from the chained-dollar estimates and from the chain-type quantity indexes are the same; any differences will be small and due to rounding. However, because the relative prices used as weights for any period other than the reference year differ from those used for the reference year, the chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP or to any intermediate aggregate. A measure of the extent of such differences is provided by a "residual" line, which indicates the difference between GDP (or another major aggregate) and the sum of the most detailed components in the table. For periods close to the reference year, when there usually has not been much change in the relative prices that are used as weights for the chain-type index, the residuals tend to be small, and the chained (1996) dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. As one moves further from the reference year, the residual tends to become larger, and the chained-dollar estimates become less useful for analyses of contributions to growth. Thus, the contributions to percent change shown in table 2 provide a better measure of the composition of GDP growth. In particular, for components for which relative prices are changing rapidly, calculation of contributions using chained-dollar estimates may be misleading even just a few years from the reference year.
